

About Us

Business Instruments Corp. acts as the single point of delivery for managing Information Technology initiatives for its clients.

At BI, we focus on mid-market to fortune-size companies, and those IT initiatives for which we take responsibility can range from Human Capital Management to IT Infrastructure Outsourcing to design, develop, and manage the Collaborative-Commerce Solutions for fast growing businesses.

BI's extensive experience and established resources for extended enterprise-wide IT Systems Integration, Systems & Network Management, Applications Development, and IT Consulting & Project Management, assure that any *IT project* is 'truly' completed.

Through our newest business component, eNovation, BI now can also engineer and implement the Business Process Enhancements required to realize the greatest possible return from those IT initiatives

"We are a Customer-driven, Process-Oriented, Quality-focused company implementing Innovations in e-business, IT Infrastructure and Systems Integration to enable real-time collaborative commerce..."

Why Business Instruments

Solutions Tailored to suit your Budget:

Our solutions are customized for each customer ensuring that you get the best returns on investment and cost of ownership is within your budget.

Full Services' Portfolio:

Our portfolio includes complete range of design, development and maintenance of IT infrastructure, systems and applications.

Zero-Risk-Timely Delivery of projects:

Our delivery methodology is characterized by accommodating scope changes, new and iterative business processes and unique security and performance challenges, thereby reducing project risk to zero.

Long-term and Rewarding Associations:

At BI, we plan the project execution on the most effective path for the client which would typically be a combination of a time spent plus a fixed cost approach.

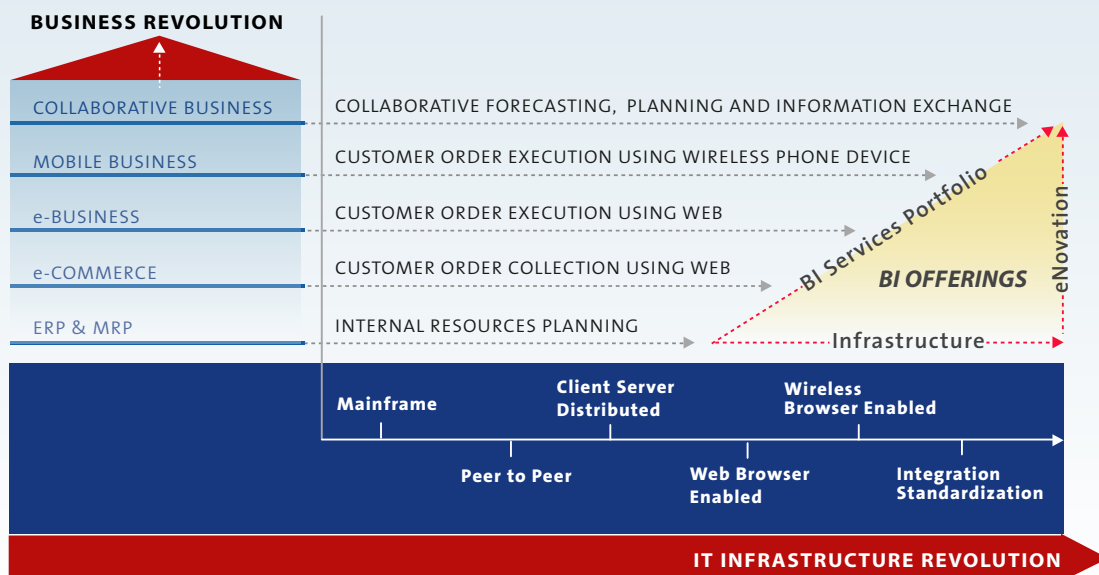

Technology Leverage:

BI, with its focus on e-technologies, is best equipped to partner with you in building and deploying latest technology solutions and exceptional partner capability required for the creation, integration and extension of a new class of applications for potential enterprise business needs.

Performance Standards:

Our investment in high performance standards ensures high customer satisfaction by cutting-down the cycle time and project costs.

BI Solution Services

Infrastructure Services

Our Infrastructure services assist customers with the design, implementation, and ongoing support of leading edge technologies such as wireless integration, virtual private networks, voice over IP, and local and wide area networking. Our Enterprise Security, Systems Integration and Systems Analysis services encompass the complete range of IT infrastructure services.

Enterprise Security

Our qualified Security Experts align security management with your business goals and put your best interests at heart

Enterprise Systems Integration

We actively manage project risks by thorough planning and incremental cutover, resulting in a smooth transition of services that minimizes disruption to your business

Enterprise Systems Analysis

We help your organization realize the maximum benefit from its investment in IT equipment, personnel, and business processes. This process includes planning and developing new computer systems or devising ways to apply existing systems' resources to additional operations. It also involves design of new systems, including both hardware and software

eNovation Services

Organizational renaissance is a necessity today and at BI, we make it happen. BI implements eNovations™

At BI, we believe in the reality of Organizational Renaissance. This is the stage in which organizations take a step back to see what Return on Expectations and Return on Investment their IT initiatives are giving back.

Our eNovation offerings include three cornerstones of collaborative commerce: eCRM, eKM and eSCM.

eCRM:

Business Instrument partners with you right from the strategic level CRM design to the development of systems and processes that facilitate the integration with your back-end legacy enterprise systems

eKM:

We at BI help introduce the potential e-Knowledge Management scenarios that exist in your organization. If they do not exist, BI can help you through the complete life-cycle of an Intra enterprise Knowledge Management solution.

eSCM:

BI works with you to set-up a high-speed and a low-cost dynamic collaboration with your network of suppliers, vendors and distributors.

 **eNovation™**

Focus on Quality

We follow time-tested process methodologies and technology practices which proliferate the efficiency and effectiveness of our solution and empower the teams to leverage their individual strengths and at the same time share their learning curve among other teams. Our technical and business experts carry out a thorough systems analysis study and a series of documented client interviews.

All our solutions, project delivery plans and post implementation services are augmented by an extensive help documentation including our analysis of project costs, roles and responsibilities, project risk analysis, and minutest measurable performance parameters and technical specifications. At BI, the quality of performance is the degree of "sustained customer satisfaction".
